Journal's Performance

Journal Impact Factor

The Journal Impact Factor (JIF) is a journal-level metric calculated from data indexed in the Web of Science Core Collection. It should be used with careful attention to the many factors that influence citation rates, such as the volume of publication and citations characteristics of the subject area and type of journal. The Journal Impact Factor can complement expert opinion and informed peer review. In the case of academic evaluation for tenure, it is inappropriate to use a journal-level metric as a proxy measure for individual researchers, institutions, or articles. Learn more

2021 JOURNAL IMPACT FACTOR	2021 JOURNAL IMPACT FACTOR WITHOUT SELF CITATIONS
4.614	3.995

Journal Impact Factor Trend 2021

 © 2026 Clarivate

Journal Impact Factor is calculated using the following metrics

Citations in 2021 to items published in 2019 (**22,029**) - 2020 (**44,221**)	=	**66,250**	=	**4.614**
Number of citable items in 2019 (**5,070**) + 2020 (**9,288**)		**14,358**		

Journal Impact Factor without self cites is calculated using the following metrics

Citations in 2021 to items published in 2019 (**22,029**) + 2020 (**44,221**) - Self Citations in 2021 to items published in 2019 (**2,204**) + 2020 (**6,690**)	=	**66,250 - 8,894**	=	**3.995**
Number of citable items in 2019 (**5,070**) + 2020 (**9,288**)		**14,358**

Journal Citation Indicator (JCI)

0.93

The Journal Citation Indicator (JCI) is the average Category Normalized Citation Impact (CNCI) of citable items (articles & reviews) published by a journal over a recent three year period. The average JCI in a category is 1. Journals with a JCI of 1.5 have 50% more citation impact than the average in that category. It may be used alongside other metrics to help you evaluate journals. Learn more

 © 2026 Clarivate

Total Citations

123,105

The total number of times that a journal has been cited by all journals included in the database in the JCR year. Citations to journals listed in JCR are compiled annually from the JCR years combined database, regardless of which JCR edition lists the journal.

 © 2026 Clarivate

Citation Distribution

The Citation Distribution shows the frequency with which items published in the year or two years prior were cited in the JCR data year (i.e., the component of the calculation of the JIF). The graph has similar functionality as the JIF Trend graph, including hover-over data descriptions for each data point, and an interactive legend where each data element's legend can be used as a toggle. You can view Articles, Reviews, or Non-Citable (other) items to the JIF numerator. Learn more

Additional metrics

Eigenfactor score

0.16424

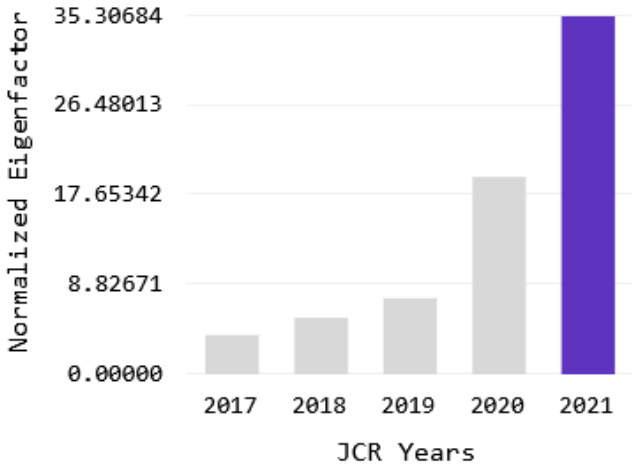

The Eigenfactor Score is a reflection of the density of the network of citations around the journal using 5 years of cited content as cited by the Current Year. It considers both the number of citations and the source of those citations, so that highly cited sources will influence the network more than less cited sources. The Eigenfactor calculation does not include journal self-citations. Learn more

Normalized Eigenfactor

35.30684

The Normalized Eigenfactor Score is the Eigenfactor score normalized, by rescaling the total number of journals in the JCR each year, so that the average journal has a score of 1. Journals can then be compared and influence measured by their score relative to 1. Learn more

 © 2026 Clarivate

Article influence score

0.866

The Article Influence Score normalizes the Eigenfactor Score according to the cumulative size of the cited journal across the prior five years. The mean Article Influence Score for each article is 1.00. A score greater than 1.00 indicates that each article in the journal has above-average influence. Learn more

 © 2026 Clarivate

5 year Impact Factor

4.799

The 5-year Impact Factor is the average number of times articles from the journal published in the past five years have been cited in the JCR year. It is calculated by dividing the number of citations in the JCR year by the total number of articles published in the five previous years.

5 year Impact Factor calculation

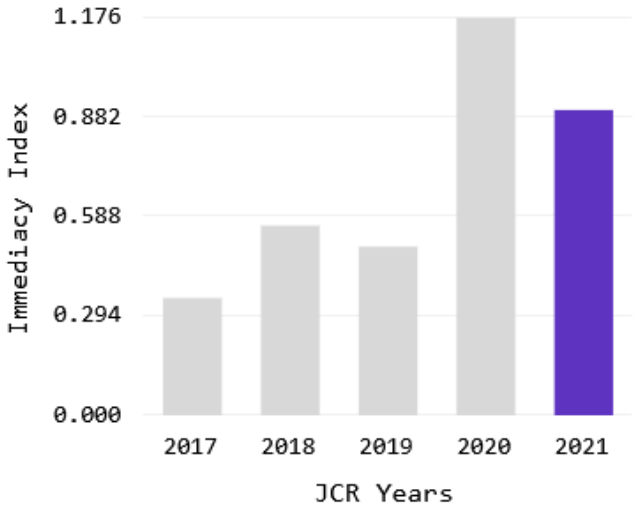

$$\frac{\text{Citations in 2021 to items published in [2016-2020] (95,927)}}{\text{Number of citable items in [2016-2020] (19,989)}} = \frac{95{,}927}{19{,}989} = 4.799$$

 © 2026 Clarivate

Immediacy Index

0.903

The Immediacy Index is the count of citations in the current year to the journal that reference content in this same year. Journals that have a consistently high Immediacy Index attract citations rapidly.
Learn more

Immediacy Index calculation

$$\frac{\text{Cites in 2021 to items published in [2021]}}{\text{Number of citable items published in [2021]}} = \frac{11{,}792}{13{,}064} = 0.903$$
